SREEANNAPURNA RALLABHANDI

Senior Data Analyst | Analytics Engineer | SQL, Power BI, Tableau & Snowflake

Dallas, TX (Open to Relocation) | 940-377-2198 | sarallabhandi@gmail.com | linkedin.com/in/sreeannapurnarallabhandi | sreeannapurnarallabhandi.github.io

PROFESSIONAL SUMMARY

Data analyst with 6+ years of experience in business intelligence, analytics engineering, and data quality. Builds SQL and Python pipelines, Snowflake and BigQuery data models, and Power BI and Tableau dashboards that business teams rely on. Cut a manual reconciliation process from four hours to five minutes, raised dashboard adoption from 68% to 94%, and reduced analysis turnaround from six hours to 15 minutes. Currently applies AI to analytics, building tools that answer business questions directly from governed data.

TECHNICAL SKILLS

Analysis & Programming: SQL, Python (Pandas, NumPy), R, VBA / Excel automation, data profiling, root-cause analysis, anomaly detection, time-series forecasting

BI & Reporting: Power BI, Tableau, KPI development, dashboard design, operational and financial reporting, stakeholder reporting

Data Platforms: Snowflake, BigQuery, Amazon Redshift, PostgreSQL, MySQL, MongoDB, Databricks, Spark / PySpark, Hadoop / Hive

Pipelines & Cloud: Airflow, Dataproc, Pub/Sub, Kafka, Flink, ETL / ELT, AWS, GCP, Azure

Data Quality & Delivery: Validation and reconciliation, requirements gathering, acceptance criteria, testing, technical documentation, Agile / Scrum

AI Tools: LangGraph, retrieval-augmented generation (RAG), FastAPI, Vertex AI, TensorFlow

PROFESSIONAL EXPERIENCE

Invences Inc **Dallas, TX**

AI Engineer – Agentic AI Analytics *Feb 2026 – Present*

- Built a 0-to-1 AI analytics application (Python, LangGraph, FastAPI, RAG, locally hosted Mistral 7B) that turns natural-language business questions into data-grounded answers across operational, customer, and event data for a team of 30–40 users.
- Gathered requirements with business and technology teams and translated analytical use cases into data requirements, acceptance criteria, validation rules, and production workflows.
- Validated answers against source data with QA, testing business questions and edge cases so every response traces back to retrieved evidence before release.
- Implemented role-based access controls, query-level audit trails, and documentation of data sources and workflow decisions to support governance and auditability.
- Set up monitoring with Vector.dev, VictoriaMetrics, and Grafana to track service health and speed up root-cause analysis.

University of North Texas **Denton, TX**

Graduate Research Assistant – Applied AI/ML *Sep 2023 – May 2025*

- Built data integration pipelines processing 2M+ research records daily from 10+ sources (Dataproc, Cloud Composer / Airflow, BigQuery), cutting analysis turnaround from six hours to 15 minutes.
- Designed a Pub/Sub ingestion pipeline connecting 10+ systems to BigQuery, reducing data delivery from overnight batches to under one minute.
- Built REST / FastAPI services for self-service data access, letting nontechnical stakeholders retrieve data independently and reducing ad hoc engineering requests by 90%.
- Implemented data-quality checks across sensor readings, route-intent events, and environmental inputs to reduce malformed records and improve repeatability of analyses.
- Applied Vertex AI and TensorFlow to classification and anomaly-detection workflows, and trained models for UAV flight-anomaly detection reaching up to 96% validation accuracy.

Forsys Inc **Hyderabad, India**

Data Analyst II *Mar 2022 – Aug 2023*

- Built Power BI sales dashboards tracking 15 KPIs for business performance monitoring.
- Analyzed 150M daily transaction records and identified unreported billing gaps, presenting findings that led to corrective action by leadership.

- Examined sales-funnel trends with Python and SQL, found where leads were dropping off, and shared findings that contributed to an 8% increase in conversion.
- Automated reconciliation and exception workflows, cutting a manual reconciliation process from four hours to five minutes.
- Refined CRM data-quality controls with operational stakeholders, contributing to 15% better CRM accuracy and 60% fewer data-quality tickets.
- Tuned Hadoop and Hive workloads through execution-plan analysis, improving query performance by 65%.

Vidcentum Software Pvt. Ltd. **Hyderabad, India**
Data Analyst *Jan 2020 – Dec 2021*

- Built Power BI and Tableau dashboards tracking 75 business metrics, raising stakeholder adoption from 68% to 94% through faster performance and clearer layouts.
- Built a unified Snowflake and Redshift data layer standardizing outputs from 15+ systems, cutting reporting latency from 48 hours to under four hours and eliminating manual reconciliation.
- Added automated data-quality checks at ingestion checkpoints, reducing on-call incidents by 55%.
- Developed reusable connectors in a configuration-driven ingestion framework, cutting new-source onboarding from two weeks to three days.
- Documented metric definitions with engineering and business teams to produce consistent operational KPIs across product lines.

EDUCATION

M.S., Advanced Data Analytics (Artificial Intelligence Concentration), University of North Texas — Dec 2025
M.S., Interdisciplinary Studies (Applied Analytics), University of North Texas — Dec 2024
B.E., Computer Science Engineering, ACE Engineering College, Hyderabad — May 2019
